ACTIVITY-BASED LEARNING ASSIGNMENT

WEB DEVELOPMENT: A SHORT REPORT ON THREE WEBSITE PROJECTS

Name: CHARITHA	**Roll Number:** 26000945
Branch: CSM	**Section:** 2

1. Introduction

This report presents three website projects created as part of the Web Development Activity-Based Learning (ABL) assignment. The projects apply basic web-development concepts to practical topics: online shopping, adventure travel, and healthy food. Each website is planned to make information easy to find and present in a clean, attractive layout.

The main aim is to understand website structure, content organization, and styling for user experience. HTML creates structure and content, while CSS controls colors, spacing, typography, cards, and responsive layouts.

Objectives:

- Practise writing clear HTML page structure with headings, paragraphs, images, links, and sections.
- Use CSS to create attractive layouts, readable text, consistent colors, and product or information cards.
- Organize information according to the needs of different website visitors effectively.
- Understand the importance of navigation, accessibility, and responsive design principles.

2. Technologies and Design Approach

HTML (HyperText Markup Language): Provides basic structure including navigation bars, headings, text, images, lists, cards, and footers.

CSS (Cascading Style Sheets): Improves visual presentation via colors, backgrounds, font sizes, spacing, borders, hover effects, grid layouts, and media queries.

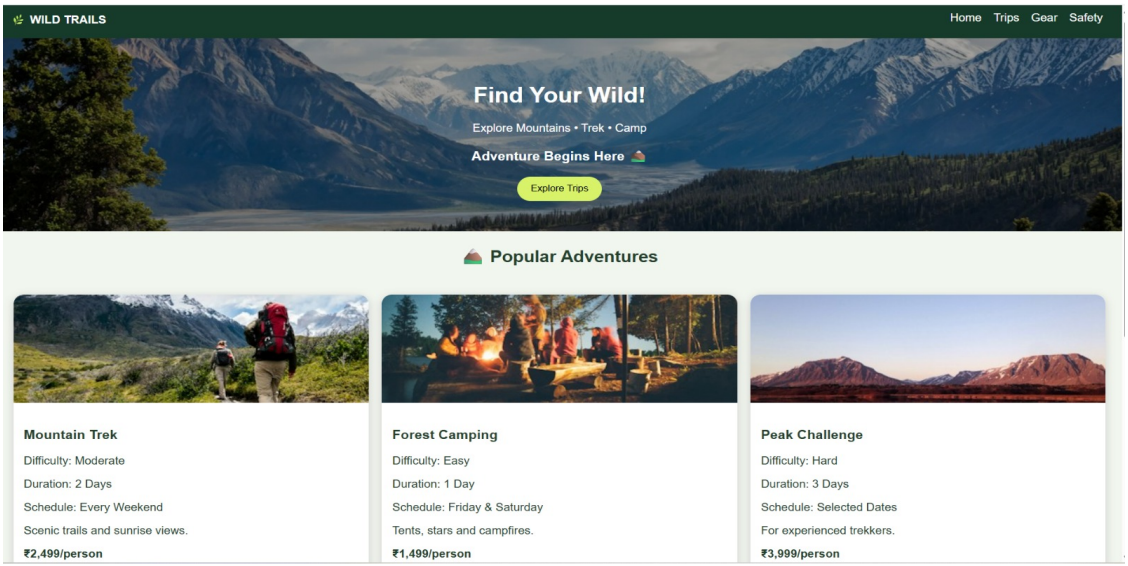

Design Approach: Clean heading areas, simple navigation, main banners, content cards, and footers with high-contrast color palettes for rapid scanning.

3. Case Study One: Online Shopping Website

Purpose: Designed to display products in a simple e-commerce interface, helping visitors browse products, compare prices, notice discounts, read ratings, and identify shopping actions from one cohesive page.

Main Features: Navigation bar, promotional banner, product grid with ratings & discounts, category choices (clothing, electronics, accessories), and responsive grid layout.

Design & Learning Outcome: Clean background and contrasting buttons make key details stand out. Provides practice in CSS Grid, responsive card alignment, and clear calls to action.

Visual Analysis & Detailed Breakdown (Shop Ease):

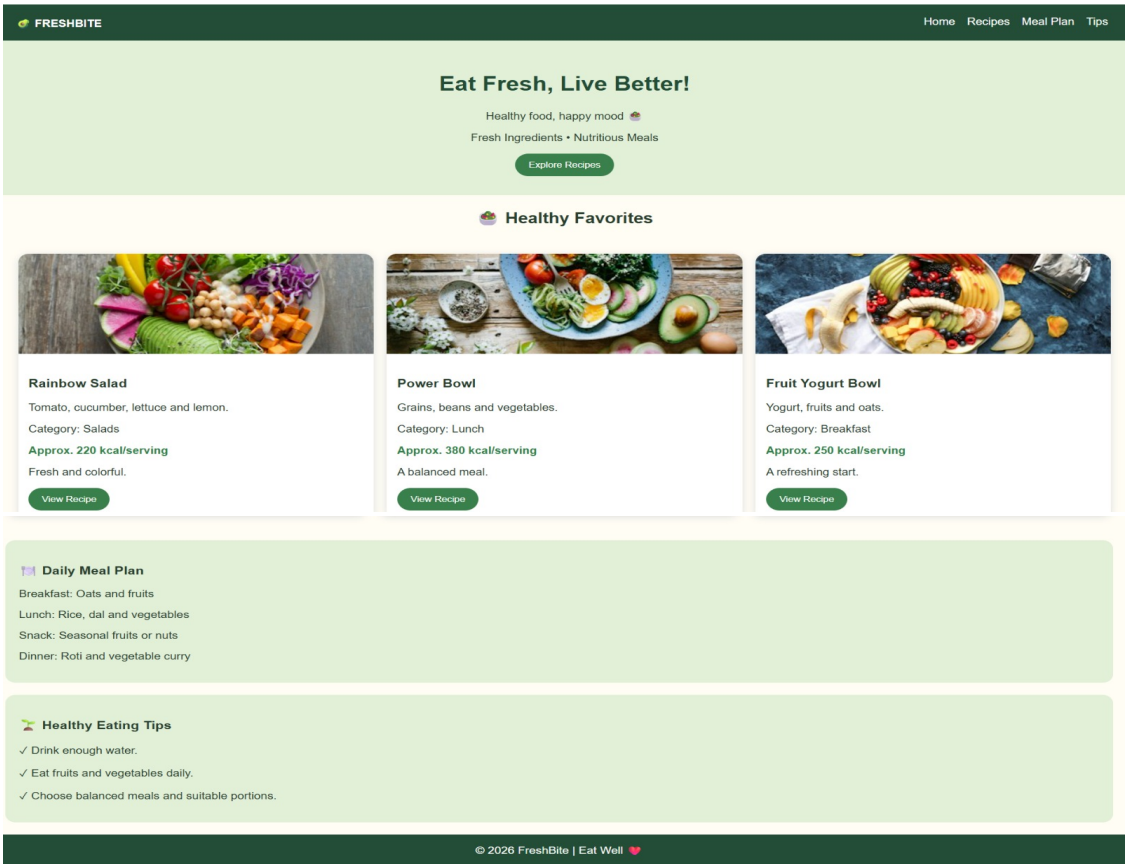

1. The top navigation bar features prominent brand identity 'SHOP EASE' paired with quick links to Home, Products, and Offers.
2. A vibrant promotional banner highlights 'Style That Speaks!' alongside a 'MEGA SALE - 40% OFF' call-to-action button.
3. The product grid neatly displays items like Sport Sneakers, Classic Handbag, and Classic Watch inside structured white cards.
4. Each product card clearly exhibits high-resolution imagery, descriptive text, star ratings, category labels, and pricing details.
5. Original prices and discounted prices are placed side-by-side with distinct discount percentages to facilitate quick price comparisons.
6. Orange 'Add to Cart' buttons are prominently positioned at the bottom of each card to drive immediate user interaction.
7. The overall layout utilizes a clean beige background with balanced padding, establishing a professional e-commerce aesthetic.

4. Case Study Two: Adventure and Trekking Website

Purpose: Introduces visitors to outdoor activities such as trekking, hiking, and camping, helping users compare trip options and review essential safety info before choosing an adventure.

Main Features: Hero section with landscape visuals, trekking route cards (duration, difficulty, price), trip schedule, equipment checklist, and safety guidelines.

Design & Learning Outcome: Outdoor photography, earthy colors, and high-contrast text support the adventure theme. Develops skills in organizing content into panels and info-heavy layouts.

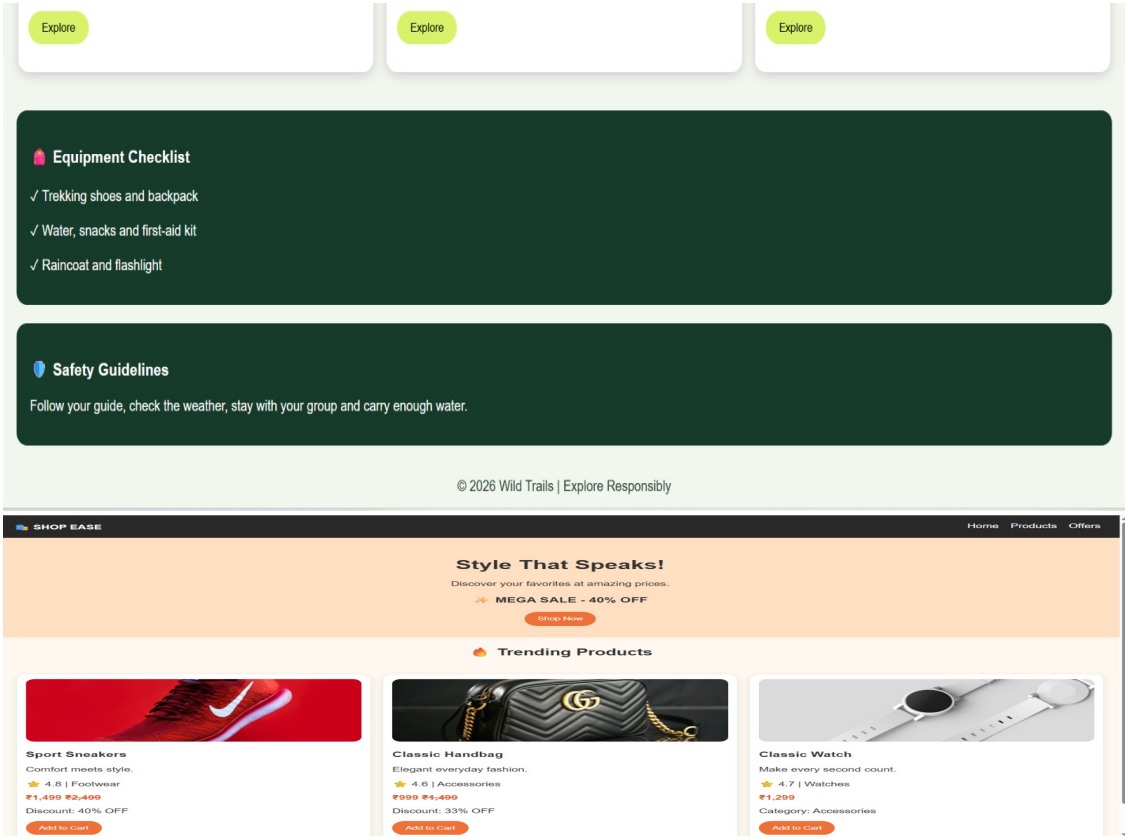

Visual Analysis & Detailed Breakdown (Wild Trails):
1. The hero banner displays an immersive mountain landscape with the welcoming title 'Find Your Wild!' and 'Adventure Begins Here'.
2. Popular adventure cards present destinations like Mountain Trek, Forest Camping, and Peak Challenge with crisp imagery.
3. Each trip card lists crucial planning metrics including difficulty level, trip duration, schedule frequency, and package pricing.
4. Earthy green and dark tones establish an authentic outdoor atmosphere while ensuring maximum text legibility.
5. A dedicated dark green 'Equipment Checklist' panel lists essential gear such as trekking shoes, first-aid kits, and flashlights.
6. The 'Safety Guidelines' panel emphasizes professional guidance, weather monitoring, group cohesion, and hydration.
7. The footer cleanly displays copyright information and responsible exploration tags, reinforcing safety and organization.

5. Case Study Three: Healthy Food and Nutrition Website

Purpose: Shares basic food and meal information in a friendly, easy-to-read format to encourage balanced food choices through meal ideas, recipe cards, ingredients, and nutrition tips.

Main Features: Welcome banner, healthy meal cards with calories, recipe information, daily meal plan breakdown, and healthy eating guidelines.

Design & Learning Outcome: Fresh green color palette, appetizing food photography, and clear cards create a welcoming, informative layout.

Visual Analysis & Detailed Breakdown (FreshBite):
1. The fresh green header banner features the 'FRESHBITE' brand alongside navigation links for Home, Recipes, Meal Plan, and Tips.
2. The welcome banner promotes healthy eating with the tagline 'Eat Fresh, Live Better!' and an 'Explore Recipes' action button.
3. Healthy favorite cards showcase vibrant dishes like Rainbow Salad, Power Bowl, and Fruit Yogurt Bowl with calorie counts.
4. Each recipe card includes precise ingredient summaries, category tags, and interactive 'View Recipe' buttons.
5. A structured 'Daily Meal Plan' section outlines balanced recommendations for breakfast, lunch, snacks, and dinner.
6. The 'Healthy Eating Tips' panel uses checkmark bullet points to encourage water intake, daily fruits, and portion control.
7. The dark green footer provides professional closing branding, completing a cohesive educational web interface.

6. Conclusion

The three case studies demonstrate how web development solves diverse information needs through structured HTML and styled CSS. This ABL activity strengthened understanding of layout, navigation, visual consistency, and user-friendly design.
